

JIYOON SHIN

+82 10-3329-2504 | jshin477@gatech.edu | [LinkedIn](#) | [Portfolio](#)

EDUCATION

Georgia Institute of Technology

M.S. in Computer Science

Atlanta, GA

May 2028

- Concentration: Machine Learning

Yonsei University

B.S. in Urban Planning and Engineering, B.A. in Applied Statistics

Seoul, South Korea

Feb. 2026

- Clubs and Societies: Department Student Council, Yonsei Computer Club

EXPERIENCE

Kearney

Research Analyst · Intern

Seoul, South Korea

Mar. 2026 - Jun. 2026

- Measured PR performance for Samsung Mobile and 5 competitor brands across traditional media and 5 social platforms by building ETL pipelines that integrated 40M+ post-level records with QA checks after each stage
- Developed a multilingual newsroom tracking system that crawled and matched local articles against HQ releases across 40+ countries using BERT and CLIP embeddings, cutting manual review time by half
- Automated dashboard validation by pulling data via the underlying REST API and comparing it against database records

Kakao Mobility

Data Scientist · Intern

Seongnam, South Korea

May 2025 - Feb. 2026

- Investigated root causes of flagged ETA deviations at the road link level, distinguishing individual-level anomalies from systematic shifts in traffic patterns to inform model improvement
- Redesigned route adherence and ETA accuracy metrics, building a monitoring dashboard backed by automated data pipelines
- Assessed the feasibility of using traffic signal cycle estimates for ETA prediction via spectral and autocorrelation analysis
- Engineered time-series traffic features and clustered 1,439 road segments via PCA and K-means, replacing static road classifications and proposing cluster-specific ETA prediction strategies based on the resulting traffic pattern analysis

Transportation Planning Lab, Yonsei University

Undergraduate Research Assistant (Advised by Prof. Jinhee Kim)

Seoul, South Korea

Mar. 2024 - Jun. 2024

- Validated determinants of railway station access time via t-test and ANOVA hypothesis testing on 15,000+ trip records
- Developed a regression model for station access time prediction, achieving $R^2 > 0.30$ through stepwise feature selection

PROJECTS

Seoul Digital Connectivity Analysis

Team Project, ITU UMC Data Hackathon

Dec. 2025 - Jun. 2026

- Analyzed digital connectivity disparities across Seoul's 25 districts, decomposing individual and district-level determinants of digital usage via two-level HLM on 10,000+ survey records
- Built an LLM-assisted text classification pipeline with multi-agent inference architecture to analyze 130K+ community posts, integrating findings with quantitative priors via Bayesian updating

Impact of Demand-Responsive Transit (DRT) on Property Values in Transport-Disadvantaged Areas

Undergraduate Capstone Project (Advised by Prof. Up Lim)

Sep. 2025 - Dec. 2025

- Constructed a transit accessibility index and matched comparable districts via a quasi-experimental design
- Estimated DRT's causal impact on property values using RDD, finding statistically significant price changes in treatment areas

Mobility Solution for Yonsei University Students

Team Project

Sep. 2023 - Dec. 2023

- Proposed a DRT-based campus shuttle model and validated feasibility via stated-preference survey of 100 students, using a multinomial logit model to estimate mode choice probabilities and identify key adoption factors
