EDUCATION

Georgia Institute of Technology

M.S. in Computer Science

Atlanta, GA

May 2028

- Concentration: Machine Learning

Yonsei University

B.S. in Urban Planning and Engineering, B.A. in Applied Statistics

Seoul, South Korea

Feb. 2026

- Clubs and Societies: Department Student Council, Yonsei Computer Club

EXPERIENCE

Kearney

Research Analyst · Intern

Seoul, South Korea

Mar. 2026 - Jun. 2026

- Measured PR performance for Samsung Mobile and 5 competitor brands across traditional media and 5 social platforms by building ETL pipelines that integrated 40M+ post-level records with QA checks after each stage
- Developed a multilingual newsroom tracking system that crawled and matched local articles against HQ releases across 40+ countries using BERT and CLIP embeddings, cutting manual review time by half
- Automated dashboard validation by retrieving data via the underlying REST API and comparing them against database records

Kakao Mobility

Data Scientist · Intern

Seongnam, South Korea

May 2025 - Feb. 2026

- Traced ETA errors link by link to isolate root causes, informing model calibration priorities shared in regular team reviews
- Redefined an undocumented route adherence metric, built its calculation logic as a scheduled SQL pipeline, and deployed a monitoring dashboard adopted across multiple teams
- Estimated traffic signal cycles from GPS speed data, validating Lomb-Scargle against autocorrelation to select the more stable estimation method for downstream calibration
- Designed 4 novel traffic dynamics features through iterative refinement, clustering 1.4K road segments via PCA and K-means into functionally distinct groups validated at ARI 0.85 across months

Transportation Planning Lab, Yonsei University

Undergraduate Research Assistant (Advised by Prof. Jinhee Kim)

Seoul, South Korea

Mar. 2024 - Jun. 2024

- Validated determinants of railway station access time via t-test and ANOVA hypothesis testing on 15,000+ trip records
- Developed a regression model to predict station access time, achieving $R^2 > 0.30$ through stepwise feature selection

PROJECTS

Seoul Digital Connectivity Analysis

Team Project, ITU UMC Data Hackathon

Dec. 2025 - Jun. 2026

- Quantified digital connectivity disparities across Seoul's 25 districts via a composite index, then applied a two-level hierarchical linear model to decompose individual- and district-level drivers of digital usage across 10,000+ survey records
- Designed an LLM-assisted multi-agent classification pipeline to surface lived connectivity issues from 130K+ community posts, then fused findings with administrative priors through Bayesian updating to flag gaps official indicators missed

Impact of Demand-Responsive Transit (DRT) on Property Values in Transport-Disadvantaged Areas

Sep. 2025 - Dec. 2025

Undergraduate Capstone Project (Advised by Prof. Up Lim)

- Defined transportation-disadvantaged districts with a custom accessibility index, then matched 12 treatment-control pairs on baseline scores to build a quasi-experimental framework
- Applied regression discontinuity design with weighted least squares around each DRT launch date, uncovering a market-conditional effect: DRT accelerated price growth in softening markets and cushioned decline in downturns

Mobility Solution for Yonsei University Students

Team Project

Sep. 2023 - Dec. 2023

- Proposed a DRT-based campus shuttle model and validated feasibility via stated-preference survey of 100 students, using a multinomial logit model to estimate mode choice probabilities and identify key adoption factors
