EDUCATION

Georgia Institute of Technology

M.S. in Computer Science

- Concentration: Machine Learning

Atlanta, GA

May 2028

Yonsei University

B.S. in Urban Planning and Engineering, B.A. in Applied Statistics

- Clubs and Societies: Department Student Council, Yonsei Computer Club

Seoul, South Korea

Feb. 2026

EXPERIENCE

Kearney

Research Analyst · Intern

- Built an ETL pipeline that processes 40M+ raw posts across traditional and social media (5 platforms, 6 brands) into aggregated coverage metrics by date, country, and theme for competitive PR performance tracking
- Developed a cross-modal article matching system that crawls 40+ country-level newsrooms and identifies whether each local article originates from an HQ release, using multilingual BERT for text and CLIP ViT-B/32 for image similarity

Seoul, South Korea

Mar. 2026 - Jun. 2026

Kakao Mobility

Data Scientist · Intern

- Conducted link-level exploratory root cause analysis on flagged ETA deviations to inform model improvement
- Designed route adherence and ETA accuracy metrics and built a monitoring dashboard with Airflow-automated data pipelines
- Engineered time-series traffic features to capture dynamic road behavior, clustered 1,439 road segments via PCA and K-means, and proposed cluster-specific ETA prediction strategies based on cluster-level pattern analysis

Seongnam, South Korea

May 2025 - Feb. 2026

Transportation Planning Lab, Yonsei University

Undergraduate Research Assistant (Advised by Prof. Jinhee Kim)

- Validated determinants of railway station access time via hypothesis testing (t-test, ANOVA) on 15,000+ trip records
- Developed a regression model for station access time prediction, achieving $R^2 > 0.30$ through iterative feature refinement

Seoul, South Korea

Mar. 2024 - Jun. 2024

PROJECTS

Seoul Digital Connectivity Analysis

Team Project, ITU UMC Data Hackathon

- Constructed a 6-dimension UMC index across Seoul's 25 districts to measure relative digital connectivity disparities
- Decomposed digital usage disparities into individual and district-level factors via two-level HLM on 10,000+ survey records
- Built an LLM-based text classification pipeline to analyze 130K+ community posts by UMC dimension, integrating findings with district-level priors via Bayesian updating to validate quantitative results

Dec. 2025 - Jun. 2026

Impact of Demand-Responsive Transit (DRT) on Property Values in Underserved Areas

Undergraduate Capstone Project (Advised by Prof. Up Lim)

- Identified transportation-disadvantaged areas by constructing a GIS-based transit accessibility index from bus stop and subway station density, and matched comparable neighborhoods via quasi-experimental design
- Estimated DRT's causal impact on property values using RDD, finding statistically significant price changes in treatment areas

Sep. 2025 - Dec. 2025

Mobility Solution for Yonsei University Students

Team Project

- Proposed a DRT-based campus shuttle and validated feasibility via stated preference survey presenting 4 transport alternatives across varied cost and travel time scenarios to 100 students
- Estimated mode choice probabilities via multinomial logit incorporating individual characteristics and transport attributes to identify key DRT adoption factors

Sep. 2023 - Dec. 2023
